

Interview session report

Recorded locally | 72.7 seconds

Session: 20260910-211631-836790

Final descriptive estimate

Observation	Result
Centered eye offset / usable tracking time	95%
Eye estimates available / interval duration	100%
Interval duration	72.7 seconds

Estimated eyes were centered relative to the face for 95% of usable tracking time. This is not a measurement of screen fixation.

This summary does not assess attention, honesty, or interview performance.

How to interpret this report

Uncalibrated iris offset within visible eye openings; head angles use a neutral baseline. Eye CENTER describes relative eye position, not verified screen fixation. Captions may contain errors. Question boundaries are manual or automatic, as labeled. Automatic markers are English wording heuristics using caption-segment start times, not exact question boundaries. They can miss questions or mark a participant's own questions; speakers are not identified. Review against the recording.
